Ian,

Thanks for the follow-up and info on RapiD. I will do some more research into that. I wanted to clear up some of the confusing language around licensing on our site and have updated it with a creative commons license for all the datasets we currently have available. That includes the ortho imagery on the open data portal, which you are free to use for OSM projects (or whatever other projects come up).

I'm still planning to follow up on bike infrastructure and tactile paving/crosswalk accessibility as we move forward with grading and prioritizing datasets for release over the next few months. I'll make sure to send you a note if we get some of that up and publicly available in the near future.

Thanks again and feel free to contact me with any more ideas and questions,

Paige Seago
